Position measuring for lifting heights up to 130 meters
Travel speed up to 4 m/s
Insensitive to dirt, smoke and humidity
Resolution up to 0.0625 mm
Easy and flexible mounting
No referencing necessary
Magnetic tape may be installed vertically freely suspended or horizontally
Wear-free, contactless and noiseless measuring principle

4 General

4.1 Information Operating Manual

This manual contains important information regarding the handling of the device. For your own safety and operational safety, please observe all safety warnings and instructions.

Precondition for safe operation is the compliance with the specified safety and handling instructions. Moreover, the existing local accident prevention regulations and the general safety rules at the site of operation have to be observed.

Please read the operating manual carefully before starting to work with the device! It is part of the product and should be kept close to the device and accessible for the staff at any time. The illustrations in the manual are for better demonstration of the facts. They are not necessarily to scale and can slightly differ from the actual design.

4.2 Explanation of Symbols

Special notes in this manual are characterized by symbols. The notes are introduced by signal words which express the magnitude of danger. Please follow this advice and act carefully in order to avoid accidents and damage and injuries.

Warning notes:

<table>
<thead>
<tr>

References:

(⁎ 1.2) Marks a reference to chapter 1.2 of this manual.
(ارة DOC 3.4) Marks a reference to chapter 3.4 of the document DOC.
4.3 Statement of Warranties

The statement of warranties is enclosed separately in the sales documents.

Guarantee

The producer guarantees the functional capability of the process engineering and the selected parameters. The period of warranty is one year and begins with the date of delivery.

4.4 Demounting and Disposal

Unless acceptance and disposal of returned goods are agreed upon, demount the device considering the safety instructions of this manual and dispose it with respect to the environment.

Before demounting:

Disconnect the power supply and secure against re-start. Then disconnect the supply lines physically and discharge remaining energy. Remove operational supplies and other material.

Disposal:

Recycle the decomposed elements:

- Metal components in scrap metal
- Electronic components in electronic scrap
- Recycle plastic components
- Dispose the remaining components according to their material consistence

**CAUTION!**

Wrong disposal causes environmental damages! Electronic scrap, electronic components, lubricants and other auxiliary materials are subject to special refuse and can only be disposed by authorized specialists!

Local authorities and waste management facilities provide information about environmentally sound disposal.
5 Safety

CAUTION!
Please read the operating manual carefully, before using the device! Observe the installation instructions! Only start up the device if you have understood the operating manual.

The operating company is obliged to take appropriate safety measure. The initial operation may only be performed by qualified and trained staff.

Selection and installation of the devices as well as their embedding into the controlling system require qualified knowledge of the applicable laws and normative requirements on the part of the machine manufacturer.

5.1 General Causes of Risk

This chapter gives an overview of all important safety aspects to guarantee an optimal protection of employees and a safe and trouble-free operation. Non-observance of the instructions mentioned in this operating manual can result in hazardous situations.

5.2 Personal Protective Equipment

Employees have to wear protective clothing during the installation of the device to minimize danger of health.

Therefore:
Change into protective clothing before performing the works and wear them throughout the process. Additionally observe the labels regarding protective clothing in the operating area.

Protective clothing:

- **PROTECTIVE CLOTHING**
  ... is close-fitting working clothing with light tear strength, tight sleeves and without distant parts. It serves preliminarily for protection against being gripped by flexible machine parts. Do not wear rings, necklaces or other jewelry.

- **PROTECTIVE GLOVES**
  ... for protecting the hands against abrasion, wear and other injury of the skin.

- **PROTECTIVE HELMET**
  ... for protection against injuries of the head.
5.3 Conventional Use

The product described in this manual was developed to execute safety-related functions as a part of an entire assembly or machine. It is the responsibility of the manufacturer of a machine or installation to ensure the proper operation of the system. The ELGO-device is conceived only for the intended use described in this manual.

The LIMAX2M - ELGO- length measuring system serves only to measure lengths.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Danger through non-conventional use! Non-intended use and non-observance of this operating manual can lead to dangerous situations.</td>
</tr>
</tbody>
</table>

Therefore:
- Only use the device as described
- Strictly follow the instructions of this manual

Avoid in particular:
- Remodeling, refitting or changing of the construction or single components with the intention to alter the functionality or scope of the device.

Claims resulting from damages due to non-conventional use are not possible. Only the operator is liable for damages caused by non-conventional use.
6 Transport and Storage

6.1 Safety Instructions for Transport, Unpacking and Loading

CAUTION
Transport the package (box, palette etc.) professionally. Do not throw, hit or fold it.

6.2 Handling of Packaging Material

Notes for proper disposal:  $\varpi$ 2.5

6.3 Inspection of Transport

Check the delivery immediately after the receipt for completeness and transport damage. In case of externally recognizable transport damages:

- Do not accept the delivery or only accept under reserve.
- Note the extent of damages on the transportation documents or delivery note.
- File complaint immediately.

NOTE
Claim any damage immediately after recognizing it. The claims for damage must be filed in the lawful reclaim periods.

6.4 Storage

Store the device only under the following conditions:

- Do not store outside
- Keep dry and dust-free
- Do not expose to aggressive media
- Protect from direct sun light
- Avoid mechanical shocks
- Storage temperature ( $\varpi$ 6 Technical Data) needs to be observed
- Relative humidity ( $\varpi$ 6 Technical Data) must not be exceeded
- Inspect packages regularly if stored for an extensive period of time (>3 months)
7 Product Features

The absolute shaft information system LIMAX2M with its significant advantages is a particularly affordable, non-sensitive and easy-to-install alternative to conventional shaft information systems. Due to the absolute measurement principle, referencing is not required after commissioning.

Compared to other shaft information systems, LIMAX2M is characterized by an extraordinarily low price. LIMAX2M is able to cover lifting heights up to 130 meters and speeds up to 4 m/s. The standard interfaces are CAN, RS422 or SSI. We also provide customized solutions on request.

This measuring system provides smallest sensor of the entire LIMAX series. With these small space requirements, LIMAX2M is ideal for remodelling and modernization.

A simple and flexible mounting ensures quick installation or replacement of the measuring system.

Features:
- Robust measuring principle to dirt, smoke and humidity
- Easy and flexible mounting
- No reference necessary
- Wear-free, contactless and noiseless measuring principle

7.1 Functional principle

The tape carries the unique positioning information as a magnetic code. It is installed free hanging in the elevator shaft by use of a mounting kit. The sensor head is mounted to the elevator car. While the actual measurement is contactless the tape must be kept within a maximum distance to the sensor head. Therefore, the tape is guided along the sensor by use of the polymer tape guide which is an integral component of the sensor head.

The magnetic measurement principle is extremely robust. Dust, dirt and humidity do not affect the measurement in any way. Also, smoke and even higher temperatures have no influence on the measuring quality. Therefore, LIMAX2M is particularly suited for application in fire fighter elevators. Also is the tape robust enough to withstand the sometimes-harsh conditions in elevator shafts.

7.2 Sensor Construction

The LIMAX2M sensor consists of the following components:
- Sensor housing with integrated signal LEDs for signaling various states.
- M12 round connector (5-pin) for power supply and communication with the lift control.
- Guide rail with plastic underlay (keeps the magnetic tape at a defined distance from the sensor).
- Holding plate for mechanical fixation of the polymer guide rail.

Figure 1: Sensor Construction
8 Technical Data

8.1 Identification

The type label serves for the identification of the unit. It is located on the housing of the sensor and gives the exact type designation (=order reference, see type designation) with the corresponding part number. Furthermore, the type label contains a unique, traceable device number. When corresponding with ELGO always indicate this data.

8.2 Dimensions Sensor

8.3 Dimensions Magnetic Tape

Figure 3: Dimensions Magnetic Tape

8.4 Technical Data Sensor

**LIMAX2M (Standard version)**

**Mechanical Data**

- **Measuring principle**: absolute
- **Repeat accuracy**: ±1 mm
- **System accuracy in µm at 20°C**: ±(1000 + 50 x L) L = measuring length in meter
- **Basic pole pitch**: 8 mm
- **Sensor housing material**: aluminium
- **Sensor housing dimensions**: L x W x H = 247 x 54 x 27 mm
- **Necessary type**: A820-80-10-1-R-D-15-BK80
- **Maximum measuring length**: 130 m
- **Connection**:
  - M12 round connector
  - RJ45 plug with fixed cable outlet on request
- **Weight**: approx. 320 g
- **Sensor cable**: 3 m standard cable length (other on request)

**Electrical Data**

- **Supply voltage**: 10 … 30 VDC
- **Residual ripple**: < 200 mVpp
- **Power input**: max. 0.2 A
- **Interfaces**: Ø 12
- **Resolution**: Ø 12
- **Speed**: max. 4 m/s

**Conditions**

- **Storage temperature**: −20 … +85 °C
- **Operation temperature**: −10 … +70 °C
  (-25 … +85 °C on request)
- **Humidity**: max. 95 %, not condensing
- **Protection class**: IP54 (IP67 on request)
8.5 Technical Data Magnetic Tape

The magnetic tape consists of two components:

- The actual magnetic tape which carries the position information
- A mechanical stainless steel back iron

**TEMPLATE Magnetic Tape AB20-80-10-1-R-D-15-BK80**

max. 260 m

**Weight magnetic tape**

c. 62 g/m (incl. magnetic tape and cover tape)

**Tape imprint**

ELGO standard, printing color black, digit height >= 5 mm

**Influence of external magnets**

External magnetic fields must not exceed 64 mT (640 Oe; 52 kA/m on the surface of the magnetic tape as this could damage or destroy the code on the tape.

**Protection class**

IP65
## 9 Installation and First Start-Up

### CAUTION

Please read the operating manual carefully before using the device! Strictly observe the Installation instructions!

In case of damage caused by failure to observe this operating manual, the warranty expires.

ELGO is not liable for any secondary damage and for damage to persons, property or assets.

The operator is obliged to take and to realize appropriate safety measures.

The operator is obliged to take appropriate safety measures. The first start-up may only be performed by staff that has been trained and authorized by the operator.

### 9.1 Operating Area

### WARNING!

Do not use the device in explosive or corrosive environments!

The device must not be installed close to sources of strong inductive or capacitive interference or strong electrostatic fields!

### CAUTION!

The electrical connections must be made by suitably qualified personnel in accordance with local regulations.

The device may be designed for switchboard mounting. During work on the switchboard, all components must be de-energized if there is a danger of touching the energized parts!

(protection against contacts)

Wiring works may only be performed in the de-energized state!

Thin cable strands have to be equipped with end sleeves!

Before switching on the device, connections and plug connectors have to be checked!

The device must be mounted in a way that it is protected against harmful environmental influences such as splashing water, solvents, vibration, shock and severe pollution and the operating temperature must not be exceeded.
9.2 Description Mounting / Installation of the Sensor

9.2.1 Installation Principle

LIMAX2M can be installed at any position in the shaft, depending on space situation and layout of the particular elevator installation.

The magnetic tape is installed freely suspended in the shaft. It can be fixed with the RMS mounting kit (available as option) on the guide rail. Alternatively fixation in the shaft head is either on beams or directly bolted into the ceiling. The necessary tension in the tape is provided by a tension weight of about 5kg. A sway guard at the bottom is recommended. This will keep the tape from swaying in an uncontrolled manner which may cause damage to the tape or other components in the shaft. Alternatively the magnetic tape can be tensioned by a spring.

The sensor head can be mounted onto the car body or car frame – again depending on the specific conditions of the elevator.
9.2.1 Installation of the Sensor

The sensor is fixated on the cabin or on the car frame. The mounting position is basically determined by the condition.

The integrated mounting notch on the housing of the sensor head allow for a very simple and self-explanatory installation from one side. You can either use M6 hexagon head screws (DIN 933) or M6 square nuts (DIN 562), to mount the system at the desired position.

Figure 6: Mounting groove on the sensor

NOTE
During installation of the magnetic tape in the sensor, pay attention to the marks on the magnetic tape and on the sensor head.

Wrong orientation of tape vs. Sensor head will yield incorrect position readings!
The arrows printed on the magnetic tape and sensor head point in positive counting direction (in the direction of the shaft head)!

9.3 Description installation / Mounting of the Magnetic Tape

NOTE External Magnetic Fields
The influence of the magnetic tape by magnetic fields must be avoided!
The magnetic tape must not come into direct contact with other magnetic fields (e.g. permanent magnets, magnetic clamps, electromagnets, magnetic stands)! This may cause irreparable damage, which will compromise the measuring accuracy or even the functioning.

9.3.1 General Information

The technology has proven to be highly robust. LIMAX2M will work under the most adverse environmental conditions. Extreme temperatures, high moisture and excessive soiling will not alter the information coded onto the tape nor will these conditions affect reading precision of the sensor. Even weak magnetic fields such as they are generated by door magnets can be tolerated.

If some basic rules and guidelines are followed, LIMAX2M systems require a minimum amount of installation and maintenance effort while offering maximum lifetime.

One important issue to consider is the protection of the magnet tape against mechanical wear. The LIMAX2M tape consists of two components:

- The magnetic tape which actually carries the position information
- A protective steel tape which gives the mechanical properties
9.3.2 Installation Concept

9.3.2.1 Basic principle for the mounting

NOTE!
The magnetic tape itself is not designed to withstand excessive mechanical wear. It is therefore important to ensure that the system is installed such that the mechanical contact between tape and sensor head is mainly between the steel tape and the polymer sensor guide. These two materials have been specifically paired for this application.

Avoiding contact between the magnetic side and the sensor could be achieved with a perfectly perpendicular installation of the band. Yet, in reality this is not practicable. It is therefore preferable to install the tape with a horizontal offset from the sensor. During operation this method will result in a forced contact between the steel side of the band and the polymer guide of the sensor which guarantees an optimal operation of the system.

Figure 7: Assessment of the pretention of the magnetic tape
9.3.3 Installation Procedure

1. Attach the top end of the tape in the shaft head. Ideally use an ELGO Mounting Kit. Check for correct orientation of the tape. The arrows on the magnetic side must point in upward direction.

2. The magnetic side of the tape must face the sensor body. In most situations this means that the steel side points to the shaft wall.

3. Drive down the shaft with inspection speed and unroll the tape. The ELGO tape packaging system has been specifically designed for this purpose. The tape can be unwound directly from the box without opening.

4. Attach the tension weight (about 7.5 kg) at the bottom end of the tape in the shaft. Secure the tape with a sway guard. Pay attention to a proper vertical mounting of the tape. If you use dowels to fix the tape in the shaft, tighten the spring such, that the according tractions results to minimum 7.5 kg. When using the ELGO Mounting Kit RMS/RMS90 this is equivalent to a spring elongation of about 90mm. Note that slightly higher tensile forces are never a problem, but avoid under-tensioning. In higher buildings it may even be preferable to slightly increase the tension in order to prevent flapping of the tape during operation. However, if correctly installed tensile forces of more than 10 kg should never be necessary.

5. Drive the car to the middle of the shaft.

6. Attach the sensor to the car. The side with the cable outlet and the LED’s must face upward.

7. Adjust the sensor using the tape as a reference. First, align sensor and magnet band on their centerline.

8. Adjust now the distance between sensor and tape. Up to a travel height of 50m we recommend an offset of at least 7 mm. This will ensure steady contact between steel side of the band and the polymer guide of the sensor. This level can be increased later, if it turns out that the band still rubbing with the magnetic side on the sensor. In higher installations this distance may be increased by the initial assembly up to 5 cm. Pay attention to a perpendicular alignment of the sensor. Misalignment will lead to increased wear.

9. Pass the tape through the sensor. Loosen the splint-pin and release the polymer guide. Insert the tape and re-attach the guide with the tape in its position.

10. Pay attention that the pad does not slip after removal of the polymer guide from the aluminium guide out and drops down in the shaft.

11. Check for proper alignment of band vs. sensor. Any angular offset should be corrected.
Figure 10: Assessment of the guiding rail of the tape in the sensor - twisted magnetic tape

Figure 11: Assessment of the guiding rail of the tape in the sensor - skewed mounting of the magnetic tape
12. **IMPORTANT: Installation Check!**

Values for tape tension and offset between tape and sensor are guidelines based on experience. But in any case, a proper check after installation is mandatory. **It must absolutely be avoided that the magnetic side constantly grinds on the sensor body during operation.**

Run an inspection trip along the complete shaft. Observe the system and pay attention to the respective positions of band and sensor. You have achieved an optimal installation if the steel side of the tape is constantly pressed slightly against the polymer guide of the sensor. At some points in the shaft also double-check on the bottom side of the sensor. If the sensor is tilted it may look good on top but the tape can still grind along the bottom edge of the sensor.

![Recommended](image1.png)  
Recommended

![Wrong](image2.png)  
Wrong vertical alignment

Figure 12: Assessment of the vertical alignment of the sensor
13. If the installations check reveals that the tape slides on magnetic side, start to increase the offset between sensor and tape. Values of up to 5 cm are acceptable. If this measure does not solve the problem it is very likely that the tape is not plumb in the shaft. This is easy to check for, provided your elevator control allows for inspection trips without the absolute position signal: Just take the tape out of the sensor and run an inspection trip along the shaft. Observe the distance between sensor and tape along the travel. Misalignments will become obvious. Also ensure that the tension on the tape is sufficient. A loosely tensioned tape will hinder proper guiding.

14. After completion of the installation clean the tape. Beginning at the top of the shaft drive down the complete travel distance pulling the magnet tape through a dry clean cloth.

**NOTE!**
Be specifically alert if steel construction work is taking place in the shaft. Steel particles released by grinding, welding or such work will adhere to the magnetic tape. The tape is insensitive to fine metal dust. However, coarser metal chips can cause problems. Clean this debris off instantly. Repeat the cleaning process before putting the elevator into operation after complete installation.

**DO NOT USE A MAGNET FOR CLEANING!**
Never use a magnet to remove metal chips from the magnetic tape. This will destroy the magnetic code and thus the magnetic tape.

**PROTECTIVE GLOVES!**
Always wear protective gloves when cleaning the magnetic tape.
10 Connections and Interfaces

10.1 LEDs (Operating Status and Notices)

The LED’s located on the front serve for monitoring of operating conditions.

Figure 13: LED signals on the upper side of the sensor

**RUN GREEN**
- For CANopen device = RUN-LED according to DR 303-3
- Other devices = Interface state, flashes during active communication

**ERR RED**
- For CANopen device = ERR-LED according to DR303-3
- Other devices = Error message
- ON = State error, system not operational
- OFF = State OK, system ready for operation

**TAPE YELLOW**
- ON = Magnet tape missing
- OFF = Magnet tape available

Indicator for magnet tape
10.2 CAN Interface

10.2.1 CANopen DS406 and DS417

For LIMAX2M the CANopen Interfaces DS406 (Encoder profile) and DS417 (Lift profile) are available. These interfaces are configured by default as follows:

Table 1: Configuration of CANopen DS406

10.2.3 Command Descriptions

10.2.3.1 Initial Operation

After starting the CANopen device is in the Pre-operational Mode (10.2.5.2) and therefore doesn’t send any position data. In order to achieve this, the device needs to be set into Operational Mode (10.2.5.1) and if necessary the sending cycle of the position data has to be adjusted (10.2.3.4).

10.2.3.2 Normal Mode

**Note!**
The commands which are described in section 10.2.3.2 Normal Mode are only processed by the CANopen device in the Operational and Pre-Operational mode.

10.2.3.3 Setting the Heartbeat Cycle Duration

A CANopen device sends the heartbeat cyclically. This message communicates the current Operating Mode to the other bus sharing units.

1. Change into the Operational or Pre-operational Mode, if necessary
2. The following illustration shows the CAN-message, which should be transmitted to the CANopen device and the following answer.

![Figure 16: Setting the Heartbeat Cycle Duration](image)

- **Master**
  - Set Heartbeat cycle time
    - ID: XXX
    - DLC: 8
    - 2B 17 10 00 YY ZZ 00 00
    - \( XXX = 600h + \text{node-ID} \)
    - Example: 604h for the device node-ID 4
    - \( YY = \text{LSB of cycle time in milliseconds} \)
    - \( ZZ = \text{MSB of cycle time in milliseconds} \)
    - Example: for a cycle time of 500ms (1F4h) is \( YY = \text{F4h and ZZ = 01h} \)

- **Acknowledgment of the CANopen device**
  - ID: XXX
  - DLC: 8
  - 60 17 10 00 00 00 00 00
  - \( XXX = 580h + \text{node-ID} \)
  - Example: 584h for the device node-ID 4

3. If the setting should be maintained in the case of a power failure, the changes have to be saved, as described in section 10.2.4.

10.2.3.4 Setting the Sending Cycle for the position data

The position data are sent cyclically by the device, therefore the device has to be in the Operational Mode (10.2.5.1).

The settings of the cycle duration takes place in the device profile DS406 in the object 1800h, Sub-index 5 and for devices with DS417 profile in object 1906h, Sub-index 5.

1. Change into the Operational or Pre-operational Mode, if necessary.
2. The following figure shows the CAN-message, which should be transmitted to the CANopen device and the following answer.
Connections and Interfaces

- Set cycle time for position data
  - ID: XXX
  - DLC: 8
  - UU VV 05 YY ZZ 00 00
  - XXX = 600h + node-ID
  - Example: 604h for the device with node-ID 4

- Acknowledgment of the CANopen device
  - ID: XXX
  - DLC: 8
  - 60 UU VV 05 00 00 00 00
  - XXX = 580h + node-ID
  - Example: 584h for the device node-ID 4

3. If the settings should be maintained in case of a power failure, the changes have to be saved, as described in section 10.2.4.

10.2.4 Saving the Parameters

In the normal case the settings are lost at power failure. In order to avoid this, they need to be saved according to the following procedure.

1. Change into the Operational or Pre-operational Mode, if necessary.
2. The following figure shows the CAN-message, which should be transmitted to the CANopen device and the following answer.

- Saving all parameters
  - ID: XXX
  - DLC: 8
  - 23 10 10 01 73 61 76 65
  - XXX = 600h + node-ID
  - Example: 604h for the device node-ID 4

- Acknowledgment of the CANopen device
  - ID: XXX
  - DLC: 8
  - 60 10 10 01 00 00 00 00
  - XXX = 580h + node-ID
  - Example: 584h for the device with node-ID 4

Figure 17: Setting the Sending Cycle for the position data

Figure 18: Saving the parameters
10.2.5 Changing the Operating Modes

10.2.5.1 Changing the device into the Operational Mode

In the Operational Mode the communication of the device is fully functional.

The following CAN-message causes the change of all CANopen participants into the Operational Mode.

Master

<table>
<thead>
<tr>
<th>ID: 000 DLC: 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>01 00</td>
</tr>
</tbody>
</table>

Figure 19: Changing the device into the Operational Mode

10.2.5.2 Changing the device into the Pre-operational Mode

In the Pre-operational Mode the communicating settings of the device are adjusted.

The following CAN-message causes the change of all CANopen participants into the Pre-Operational mode.

Master

<table>
<thead>
<tr>
<th>ID: 000 DLC: 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>80 00</td>
</tr>
</tbody>
</table>

Figure 20: Changing the device into the Pre-operational Mode

10.2.5.3 Changing the device into the Stopped Mode

Bus sharing units in the Stopped Mode are passive participants. In this mode all the communication is turned off, except the monitoring activity (e.g. heartbeat).

The following CAN-message causes the change of all CANopen participants into the Stopped Mode.

Master

<table>
<thead>
<tr>
<th>ID: 000 DLC: 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>02 00</td>
</tr>
</tbody>
</table>

Figure 21: Changing the device into the Stopped Mode

10.2.6 LSS Configuration

Basic settings like node-ID and baud rate have to be adjusted with the Layer Setting Services (LSS).

10.2.6.1 Changing into the LSS Configuration Mode

In order to be able to change the Parameter (node-ID, bit rate), the device has to be changed into the LSS Configuration Mode.

ATTENTION!

With the following command all the bus sharing units which are in the Stopped Mode are changed into the LSS Configuration Mode. Use this command, if only one device is connected to the bus, because other devices could be affected in their function.
The following CAN-message causes the change into the LSS Configuration Mode.

```
04 01 00 00 00 00 00 00
DLC: ID: 7E5 8
```

Figure 22: Changing into the LSS Configuration Mode

### 10.2.6.2 Saving the parameters in the LSS Mode

In order not to lose the changes in case of a power failure, they have to be saved in the non-volatile memory of the CANopen device.

The following figure shows the necessary message for this procedure.

```
17 00 00 00 00 00 00 00
DLC: ID: 7E4 8
ID: DLC: 7E5 8
17 00 00 00 00 00 00 00
```

Figure 23: Saving the parameters in the LSS Mode

---

**ATTENTION!**

During the saving procedure the device is not accessible over a period of a few milliseconds.
### 10.2.7 Setting the Baud rate

1. Change the device into the Stopped mode (see section 10.2.5.3)
2. Change the device into the LSS Configuration Mode (see section 10.2.6.1)
3. Change baud rate according to the following command:

```
13 00 XX 00 00 00 00 00
```

**Master**

**CANopen device**

<table>
<thead>
<tr>
<th>ID</th>
<th>DLC</th>
</tr>
</thead>
<tbody>
<tr>
<td>7E5</td>
<td>8</td>
</tr>
</tbody>
</table>

Values for **XX**:

- **0** = 1 MBit/s
- **1** = 800 kBit/s
- **2** = 500 kBit/s
- **3** = 250 kBit/s
- **4** = 125 kBit/s
- **5** = reserved
- **6** = 50 kBit/s
- **7** = 20 kBit/s
- **8** = 10 kBit/s

4. Save parameter as described in section 10.2.6.2.
5. Turn the device off and restart it again.

### 10.2.8 Setting the node-ID

1. Change the device into the Stopped Mode (see section 10.2.5.3)
2. Change the device into the LSS Configuration Mode (see section 10.2.6.1)
3. Change node-ID with the following message:

```
11 XX 00 00 00 00 00 00
```

**Master**

**CANopen device**

<table>
<thead>
<tr>
<th>ID</th>
<th>DLC</th>
</tr>
</thead>
<tbody>
<tr>
<td>7E5</td>
<td>8</td>
</tr>
</tbody>
</table>

**XX** = new node-ID in the range 01h .. 7Fh

4. Save parameter as described in section 10.2.6.2.
5. Turn the device off and restart it again.
10.3 SSI Interface

10.3.1 Function Principle

If the clock is not interrupted for the time Tm - T/2 (output of further 25 periods), the shift register clocks once again the same data value (error recognition in the evaluation). Some encoders contain a Power Failure Bit (PFB). **Attention:** With the LIMAX2M the PFB is always "LOW"!

10.3.2 Data Protocol

![Data Protocol SSI Diagram]

**PFB** = Power Failure Bit  
**T** = length of clock signal  
**Tm** = monostable multivibrator time > 10µs

Figure 26: Data Protocol SSI

</tr>
</tbody>
</table>

Table 4: Pin Assignment SSI
10.4 RS422 and RS485* Interface

*) Attention: RS485 only unidirectional

If the measuring system is equipped with an RS422 or RS485 interface, the data communication has the following format:

9600 bit/s baud (other bitrates on request)
1 Start bit
8 data bits
1 stop bit
no parity

10.4.1 Data Protocol

The measured absolute position will be represented in the three ABS-position data bytes.

Version 4221

<table>
<thead>
<tr>
<th>STX 02h</th>
<th>MSB xh</th>
<th>xh</th>
<th>LSB xh</th>
<th>MSB yh</th>
<th>yh</th>
<th>ETX 03h</th>
<th>00h</th>
<th>0Dh</th>
</tr>
</thead>
</table>

STX = starts a message
ETX = ends a message

ABS position

Speed

Figure 27: Data Protocol Version 4221

Versions 4220 / 4850

<table>
<thead>
<tr>
<th>STX 02h</th>
<th>MSB xh</th>
<th>xh</th>
<th>LSB xh</th>
<th>ETX 03h</th>
<th>00h</th>
<th>0Dh</th>
</tr>
</thead>
</table>

STX = starts a message
ETX = ends a message

ABS position

Figure 28: Data Protocol Versions 4220 / 4850

10.4.2 Command Descriptions

Important:
Before you send a new message to the LIMAX2M wait for the answer first. After allocating a new address the LIMAX2M answers in max. 0.5 seconds. In other cases it even in a few milliseconds. After this time it is not expected to get an answer (transmission error).

10.4.2.1 Principle Format of Message

<table>
<thead>
<tr>
<th>To LIMAX2M</th>
<th>answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>STX 02h</td>
<td>Byte 1</td>
</tr>
<tr>
<td>Byte 2</td>
<td>Byte check</td>
</tr>
<tr>
<td>ETX 03h</td>
<td>Byte 3</td>
</tr>
<tr>
<td></td>
<td>Byte 4</td>
</tr>
</tbody>
</table>

STX = starts a message
ETX = ends a message
Check Byte = contains the arithmetic checksum of STX, byte 1 and byte 2.
The meaning of bytes 1 to 4 can be found in the following chapters.
10.4.2.2 Position request of LIMAX2M with the address “i”

To LIMAX2M

<table>
<thead>
<tr>
<th>STX</th>
<th>02h</th>
<th>05h</th>
<th>05h</th>
<th>Byte check</th>
<th>ETX</th>
<th>03h</th>
</tr>
</thead>
</table>

answer

<table>
<thead>
<tr>
<th>STX</th>
<th>02h</th>
<th>MSB</th>
<th>xh</th>
<th>XXh</th>
<th>LSB</th>
<th>Xh</th>
<th>Adr.</th>
<th>i</th>
</tr>
</thead>
</table>

04h = characterizes the message as position request
i = address of the LIMAX2M (0Bh – 7Fh) to request

Important: At the answer you get the new address + 80h.

Position values are always smaller than FFFF00h.

10.4.2.3 A LIMAX2M address request

Attach in each case only one LIMAX2M e.g. over a RS422 converter to the serial interface (COM-port) of a PC.

To LIMAX2M

<table>
<thead>
<tr>
<th>STX</th>
<th>02h</th>
<th>06h</th>
<th>i</th>
<th>Byte check</th>
<th>ETX</th>
<th>03h</th>
</tr>
</thead>
</table>

answer

<table>
<thead>
<tr>
<th>STX</th>
<th>02h</th>
<th>FFh</th>
<th>FFh</th>
<th>i</th>
<th>Xh</th>
<th>ETX</th>
<th>03h</th>
</tr>
</thead>
</table>

05h = characterizes a message as address request
i = LIMAX2M address
FFh FFh does not occur immediately after STX with position inquires as answer!
In this case (0Bh <= i <= 7Fh) this is the answer of the address request.

10.4.2.4 Allocation of an LIMAX2M address

Attach in each case only one LIMAX2M e.g. over a RS422 converter to the serial interface (COM-port) of a PC.

To LIMAX2M

<table>
<thead>
<tr>
<th>STX</th>
<th>02h</th>
<th>06h</th>
<th>i</th>
<th>Byte check</th>
<th>ETX</th>
<th>03h</th>
</tr>
</thead>
</table>

answer

<table>
<thead>
<tr>
<th>STX</th>
<th>02h</th>
<th>FFh</th>
<th>FFh</th>
<th>i +</th>
<th>80h</th>
<th>ETX</th>
<th>03h</th>
</tr>
</thead>
</table>

06h = characterizes a message as address allocation
i = the new LIMAX2M address. Important: At the answer you get the new address + 80h.

The addresses 80h – FFh as well as 00h – 0 Ah are FORBIDDEN. If you try to assign an address smaller than eight, LIMAX2M gives you a “negative answer” and keeps its former address.

10.4.2.5 Error Messages

If one of the described operations failed for some reason LIMAX2M gives an error message with a respective error-code.

Answer from LIMAX2M

<table>
<thead>
<tr>
<th>STX</th>
<th>02h</th>
<th>FFh</th>
<th>FFh</th>
<th>ERR</th>
<th>Xh</th>
<th>ETX</th>
<th>03h</th>
</tr>
</thead>
</table>

ERR = Error-Code (04h – 0Ah) error – codes are listed at the next page.
### Table 5: Error-codes of an addressable LIMAX2M

<table>
<thead>
<tr>
<th>Code</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>04h</td>
<td>Wrong sequence of bytes sent to LIMAX2M, for example if 4. Byte after STX is no ETX or the Byte after STX is not 0x04, 0x05 or 0x06.</td>
</tr>
<tr>
<td>05h</td>
<td>Receiving Error / Interface Error (for example if a message with a wrong baud rate was sent etc.)</td>
</tr>
<tr>
<td>06h</td>
<td>Invalid LIMAX2M address: appears after trying to assign an address smaller 0Bh or bigger 7Fh to LIMAX2M.</td>
</tr>
<tr>
<td>07h</td>
<td>LIMAX2M has lost its address: internal check of X redundantly stored address of LIMAX2M has failed. This message is sent at power up immediately if an error in reading EEPROM is detected or if the internal address error cannot be fixed.</td>
</tr>
<tr>
<td>08h</td>
<td>Internal EEPROM storage error.</td>
</tr>
<tr>
<td>09h</td>
<td>Error in transmission of position (no tape, tape damaged or distance between tape and sensor head too big).</td>
</tr>
<tr>
<td>0Ah</td>
<td>Check-Sum-Error: Check-sum of a message sent to LIMAX2M is wrong.</td>
</tr>
</tbody>

Disturbances, Maintenance, Cleaning

11 Disturbances, Maintenance, Cleaning

This chapter describes possible causes for disturbances and measures for their removal. In case of increased disturbances, please follow the measures for fault clearance in chapter \(^{11}.1\). In case of disturbances that cannot be eliminated by following the advice and the fault clearance measures given here, please contact the manufacturer (see second page).

11.1 Fault Clearance

**CAUTION!**
The device, the connection line and the signal cable must not be installed next to sources of interference that emit strong inductive or capacitive interference or strong electrostatic fields.

External perturbations can be avoided thorough suitable cable routing.

The screen of the signal output cable should only be connected to the following circuit on one side. The screens should not be grounded on both sides. Signal cables always have to be routed separately from the load power line. A safety distance of at least 0,5 m has to be kept from inductive and capacitive sources of interference such as contactors, relays, motors, switching power supplies, clocked controllers etc.

If interferences occur in spite of all the items stated above being observed, please proceed as follows:
1. Installation of RC-circuits via contactor coils of AC-contactors (e.g. 0,1 \(\mu\)F / 100 \(\Omega\))
2. Installation of recovery diodes via DC-inductors
3. Installation of RC-circuits via the different motor phases (in the terminal box of the motor)
4. Do not connect protective earth and ground
5. Connect a mains filter ahead of the external power pack

11.2 Re-start after Fault Clearance

After the fault clearance:
1. Reset the emergency stop mechanism if necessary
2. Reset the error report at the super-ordinate system if necessary.
3. Ensure that there are no persons in the danger area.
4. Follow the instructions from chapter \(^{9}\).

**WARNING!**
Danger of injury through non-conventional fault clearance!

Non-conventional fault clearance can lead to severe injuries and damage of property.

Therefore:
- Any work to clear the faults may only be performed by sufficiently qualified staff
- Arrange enough space before starting the works
- Make sure that the mounting area is clean and tidy. Loose components and tools are sources of accidents.

If components need to be replaced:
- Pay attention to a correct installation of the spare parts.
- Reinstall all the fixing elements properly
- Before turning on the device, ensure that all covers and safety equipment is installed correctly and functions properly
11.3 Maintenance

The device is maintenance-free.

WARNING!
Danger through non-conventional maintenance!

Non-conventional maintenance can lead to severe injuries and damage of property.

Therefore:
Maintenance works may only be completed by staff that has been authorized and trained by the operator.

11.4 Cleaning

WARNING!
The device can only be cleaned with a damp cloth, do not use aggressive cleanser!
## 12 Type Designation

**Series/Type:**
LIMAX2M = LIMAX2 MINI (1-channel)

**SN-number:**
- 00 = standard version
- 01 = 1. special version (etc.)

**Signal cable length:**
- CON = M12 connector on device (standard)
- 030 = 3.0 m, fixed cable outlet on device
- 050 = 5.0 m, fixed cable outlet on device

**Resolution:**
- 050 = 500 µm = 0.50 mm
- 0125 = 125 µm = 0.125 mm
- 0250 = 250 µm = 0.25 mm

**Interface:**
- 00 = standard version
- 01 = 1. special version (etc.)

**CAN-Interface:**
- With termination 120R (T) | CNXT
- Without termination | CNX
- With termination 120R (T) | CN0T (Standard)
- Without termination | CN0
- With termination 120R (T) | CN0XT
- Without termination | CN0X
- With termination 120R (T) | C00T (Standard)
- Without termination | C00
- With termination 120R (T) | C01T
- Without termination | C01 (Standard)

**Connection options:**
M12M = 5(8)-pin M12-round plug  
(number of poles or assignment depend on the chosen interface)

**Example**
